Dear Sir,

We would like to introduce Salher Exim Private Limited, a seed production and export company based in Jalna, Maharashtra. We specialize in the production and international supply of high-quality hybrid and notified vegetable seeds, supported by a strong foundation of research and field expertise.

Our operations focus on controlled and monitored seed production practices to ensure high genetic purity, strong germination, and consistent field performance. We work closely with experienced growers and follow systematic crop management protocols throughout the production cycle.

We produce a wide range of hybrid and notified vegetable seeds including tomato, chilli, capsicum, okra, brinjal, etc. Each crop is grown under carefully selected agro-climatic conditions and processed using standardized quality control procedures.

Our seed production activities are carried out in key agricultural regions of Maharashtra, particularly in and around Jalna, where favorable climate, fertile soil, reliable irrigation, and skilled labor contribute to consistent seed quality. These regions are well connected by road, rail, and air, allowing efficient logistics and timely dispatch for domestic and international shipments.

We would welcome the opportunity to be considered for your seed procurement or collaboration requirements on a pilot or commercial scale. We assure you of consistent supply and strict adherence to international standards of physical purity, genetic purity, germination, and moisture content.

Thank you for your time and consideration.

Salher Exim Private Limited

Producers of Premium Hybrid & Notified Vegetable Seeds

Salher Exim Private Limited is a seed production company specializing in high-quality hybrid and notified vegetable seeds for bulk supply and international markets. Supported by advanced breeding practices and strict quality control, our seeds deliver reliable performance across diverse growing conditions.

Key Highlights

- In-house seed production and processing
- Bulk supply for domestic and global markets
- High germination and genetic purity
- Export-standard packaging and handling
- Trusted international distribution network

About Us

Our Mission

Our mission is to supply high-quality hybrid and notified vegetable seeds that deliver strong germination, uniform growth, and reliable yield for farmers worldwide. We aim to combine research excellence with trusted performance, ensuring that every seed supports better agriculture and long-term success for growers across different climates.

Our Vision

Our vision is to become a globally recognized leader in exporting premium hybrid and notified vegetable seeds that empower farmers and strengthen agricultural productivity across continents. We aim to set new benchmarks in quality, research, and reliability by offering seed varieties that consistently perform in diverse geographical and climatic conditions.
